

Visit to Aina National Park Kobe, Japan August 15, 2006

Nancy J. Turner, with
Fumiaki Taniguchi
colleagues and Students

Thank you for all the teachings!

A Park in the process of *Ecocultural Restoration...*

Diversity of landscapes

Clematis vine

Yamamomo (*Myrica rubra*)

Unknown vines:
beauty in form and colour

More beautiful plants: Persimmon (?),
Camellia, *Wisteria*, *Rhamnus* (?)

Traditional thatched house

Bamboo and straw house

Gardens, Aina Park

Untilled rice paddy

Three wise men

Ferns and leaves: many kinds

Some dangers of the park

- Mamushi snake and poison sumac

Botanist and Tengu nahani and meadow rue flowers

Lespedeza virgata

Botany: some rare plants
(*Potentilla discolor*,
Peltoboykinea watanabei)

Syneilesis tagawei: very rare

A photograph of a document with text, possibly a list or a table, containing information about the plant *Syneilesis tagawei*. The text is in Chinese and includes details such as the plant's name, its status, and its distribution.

More plants: *Phytolacca*, *Sambucus* like shrub, foxtail millet, saru tori ibara vine...

Our family

Gift for Shea from Grandpa Sensei
